

Work Experience

SQL Developer – Elevate Labs (Remote)

Jun – Aug 2025

- Wrote and fine-tuned over 20 complex SQL queries to uncover key insights from more than **100K** user activity records. These findings helped the product team pinpoint where users were dropping off and guided improvements to boost app engagement.
- Designed clear and efficient relational database **schemas**, reducing average query response time by **30%** and improving data consistency—strengthening backend performance and making it easier to integrate new data sources in the future.
- Built interactive dashboards in Metabase and SQL to give stakeholders **real-time** visibility into performance metrics. These dashboards supported data-driven decisions that improved user retention by **12%** in just one quarter.

Projects

FOIR Analysis – Python, Numpy, Seaborn, Matplotlib

GitHub: [FOIR-Analysis](#)

- Collected and analyzed financial data to study the impact of income and obligations on loan eligibility using **Python**.
- Cleaned datasets with **Pandas** & **NumPy** and performed EDA using **Matplotlib** & **Seaborn** to visualize correlations between FOIR values and repayment capacity.
- **Outcome:** Provided data-driven insights to help optimize lending thresholds and improve financial decision-making.

Blinkit 10-Minute Delivery Analysis – Python, Seaborn, Scikit Learn

Github: [10-Minute Feasibility Study](#)

- Created and analyzed synthetic delivery data (100+ orders) for Blinkit-style operations in the Delhi NCR region using **Python**, **Pandas**, and **NumPy**.
- Built interactive geospatial visualizations using **Folium**, demand clustering with **KMeans**, and spatial models like **Voronoi diagrams** to identify bottlenecks and hotspots.
- **Impact:** Helped evaluate the practicality of 10-minute deliveries in dense urban areas by mapping inefficiencies and recommending fulfillment zone optimizations.

HR Attrition Analysis – Power BI, MS Excel

GitHub: [HR Attrition Dashboard](#)

- Designed an interactive Power BI dashboard to visualize employee attrition trends using key metrics like age, department, salary, and job satisfaction.
- Integrated slicers and DAX measures to allow dynamic filtering by business unit and performance ratings.
- **Result:** Helped HR identify high-risk departments and reduce attrition by enabling targeted retention strategies.

Technical Skills

- **Languages:** Python, SQL, DAX
- **Data Analytics Tools:** Microsoft Power BI, Microsoft Excel, Google sheets, Jupyter Notebook
- **Technologies / Frameworks:** Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, HTML5, CSS3
- **Developer Tools:** GitHub, Jupyter Notebook, VS Code, Canva

Education

B.Tech in Computer Science and Engineering (AI/ML)

Ajay Kumar Garg Engineering College, Ghaziabad

2022 – 2026

Percentage: 78%

Senior Secondary Education (CBSE)

Gorakhpur Public School

2019–2021

Percentage: 94.4%

Certifications & Courses

- **Data Analytics Summer Certificate** – IBM, Aug 2025
- **IBM Watson Studio Essentials** – IBM, Jul 2025
- **Data Analyst Skillpath - 72 Days Bootcamp** – Udemy, Jun 2025
- **SQL (Intermediate)** – HackerRank, May 2025
- **Intro to Data Analytics** – IBM (SkillBuild), Dec 2024

Position of Responsibility

Head Coordinator – Training & Placement Cell, AKGEC

2025 – Present

Content Writer – Photography & Media Club, AKGEC

2024 – Present
