Portfolio: https://potfolio-ftgafnc8hud8axbs.centralus-01.azurewebsites.net/

Education

B.Tech in Computer Science and Engineering — Rungta College of Engineering and Technology 2022–2026

Experience

Azure Student Intern — Microsoft

May 2025–Present

- Built and managed backend services using cloud-native architecture with Azure App Services and AKS.
- Containerized applications using Docker and orchestrated deployments with Kubernetes.
- Designed CI/CD pipelines using GitHub Actions and Azure Pipelines (Jenkins-aligned workflows).
- Implemented RBAC, Azure AD authentication, and secure secrets management using Key Vault.

Founder — DevSync OpenSource

Jan 2025–Jan 2026

- Architected RESTful backend services using Node.js (Express) and MongoDB.
- Designed scalable APIs, role-based access control, and optimized NoSQL queries.
- Managed 15+ repositories, contributor workflows, and containerized dev environments.

Gold Microsoft Student Ambassador

Sep 2023–Present

- Developed Python-based ML solutions and integrated backend APIs for prediction pipelines.
- Pitched production-ready solutions to industry partners including TCS and NAAC.

Projects

Voyar E-commerce Backend API — Node.js, Express v5, MongoDB, Razorpay, Shiprocket

- Built a production-grade RESTful backend for an eyewear e-commerce platform with secure JWT-based authentication and role-based admin access.
- Implemented complete order lifecycle management, payment processing (Razorpay), refunds, and webhook-based asynchronous event handling.
- Integrated Shiprocket for shipping, real-time tracking, courier assignment, and automated shipment status updates.
- Enforced OWASP security standards using rate limiting, input sanitization, account lockout, 2FA, and secure email workflows.

DevSync OpenSource Platform — Node.js, Express, MongoDB, Docker

- Architected scalable backend services to manage open-source projects, contributors, authentication, and role-based access control.
- Designed REST APIs and optimized NoSQL schemas to support high contributor activity.
- Containerized services using Docker for consistent development and deployment workflows.

Azure Document Analyzer — Node.js, Azure AI Form Recognizer

- Developed backend services for real-time document analysis using Azure AI APIs.
- Designed API-driven workflows enabling fast, scalable document processing on cloud infrastructure.

Zenith (Top 25 – BuzzOnEarth Hackathon) — Python, Machine Learning

- Built ML-backed backend services for prediction and analytics using supervised learning models.
- Deployed cloud-integrated pipelines for real-time inference and performance optimization.

Skills

Languages: Python, JavaScript, Java, C, C++

Backend: Node.js, Express, REST APIs

Databases: MySQL, MongoDB

Caching & Search: Redis, ElasticSearch

DevOps: Docker, Kubernetes, GitHub Actions, Jenkins (CI/CD concepts)

Tools: Git, Postman, Linux

Certifications

Microsoft Azure AI Fundamentals • MongoDB Developer Toolkit • Postman API Expert • GitHub Actions • Google Cloud AI/ML
