SUMMARY

Actively seeking an entry-level Data Analyst position in company to leverage my academic knowledge in data analysis and contribute to data-driven decision making. Highly motivated and eager to learn, seeking a challenging Data Analyst role where I can apply my analytical skills and contribute to business growth through insightful data analysis.

SKILLS

Programming Languages:

Programming Languages: Python (Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, Stats models - Data

Visualization: Matplotlib, Seaborn, Plotly, Tableau - Data Manipulation: Pandas, NumPy - Machine

Learning: Scikit-learn, TensorFlow, Keras.

Database: **MySQL**

Technologies: **Machine Learning (ML)** Visualization Tools : **Power BI, Tableau, MS Excel, V look up, H look up, Pivot Tables, Excel Dashboard, Audacity software.**

SEO analysis using different tools and extensions. Python Automation for Data scraping using Selenium.

SEO tools

- Keyword Research & Analysis
- On-Page & Off-Page Optimization
- Technical SEO & Site Audits
- Google Analytics & Search Console
- Local SEO & Mobile SEO
- SEO Tools (SEMrush, Ahrefs, Moz, etc.)

PROJECTS (INTERNSHIP WITH INDITRONICS-OCTOBER 2025)

- 1.Utilized Audacity software to listen to and extract key audio segments from Radio City broadcasts.
- 2.Accurately transcribed spoken content and categorized data in MS Excel for performance tracking and content analysis.
- 3.Maintained data consistency and quality by cross-verifying timestamps, speaker details, and audio durations.

PROJECTS (Internship with Digital Ipsum pvt Ltd.)

Lead Generation (Restaurants Analysis of Vietnam), (Fitness Centers Analysis of UAE) | MS excel, Power BI

Scraped data of different restaurants in UAE, using python automation and data scraper extension and performed detail analysis on their website appearances, their social media presence and their SEO, Page speed and Website speed rankings along with DA(Domain Authority), PA (Page authority) and Moz rank ratings using different DA,PA checker sites.

Conducted a thorough analysis and derived actionable insights using Power BI dashboard using different charts.

Generated top leads related to Website Enhancement, SEO ranking improvisation and SMO revamping

Diabetes Prediction | Python

The type of algorithm which is used to predict the diabetic parameter is an Classification algorithm. Step Followed

Developed a machine learning model to predict the likelihood of diabetes in patients based on historical health data, aiming to support early diagnosis and intervention. Utilized a publicly available dataset with attributes like age, BMI, blood pressure, insulin levels. Downloaded datasheet from kaggle and performed Exploratory data analysis on data using.

Handled missing values by applying imputation techniques. Performed data scaling and normalization to standardize the features for improved model performance, using Standard Scaler. Implemented multiple classification algorithms including Decision tree, Bagging Classifier to predict the probability of diabetes. Split the dataset into training (80%) and testing (20%) sets, and trained the model using scikit-learn. Used Cross-Validation to ensure model generalization and avoid overfitting. Evaluated the model's performance using accuracy, precision, recall.

Sales Analysis for E-Commerce | MS Excel

1. Utilized PivotTables and Pivot Charts to summarize large data sets and track sales performance by product, region, and time period.
2. Created required customized columns using formulae and formatting required for analysis.
3. Developed dynamic, interactive dashboards using Excel formulas, Slicers, and Data
4. Validation to allow users to filter and explore the data with ease.
5. The dashboard facilitated quick access to performance metrics.

Car Sales Analysis| Power BI

1. Worked on Car sales schema Car details and Car sales queries.
2. Created pie charts, Line charts, Table chart, bar chart for getting meaningful insights.
3. Created navigation buttons to navigated through pages.
4. Knowledge of power query used for connecting and importing data.

<https://github.com/deep884/Dataanalytics.git>

MYSQL (Analysis of Swiggy online food delivery app)

1. Imported Swiggy data from Table Data import Wizard in MYSQL.
2. Retrived the data of restaurants having rating more than 4.5 and 5 most expensive restaurants for Indian Cuisine.
3. Solved queries regarding average rating of Restaurants in each city.
4. Retrived data for top 1 city with the highest number of restaurants.

COURSE

Masters in Data Science and

IT Vedant Education Pvt. Ltd.

Coursework: Machine Learning, Python, Power BI, Excel, Mysql

CERTIFICATIONS

Data Analysis with Python from IBM | 2024

Foundation with SQL Certification from IT Vedant, Pune 2024

Masters in Data Science and Analytics with AI from IT Vedant Pune 2024

DWD (Diving into World of Data from IT Vedant Pune 2024

Unified Mentor

Data Science and Analytics Essentials from IT Vedant Pune 2024

Completed Internship from Digital Ipsum 2025.

EDUCATION

Bachelors of Architecture
